

MANUFACTURE OF PROFESSIONAL CLOTHING

---

| ANNO  
| 1995

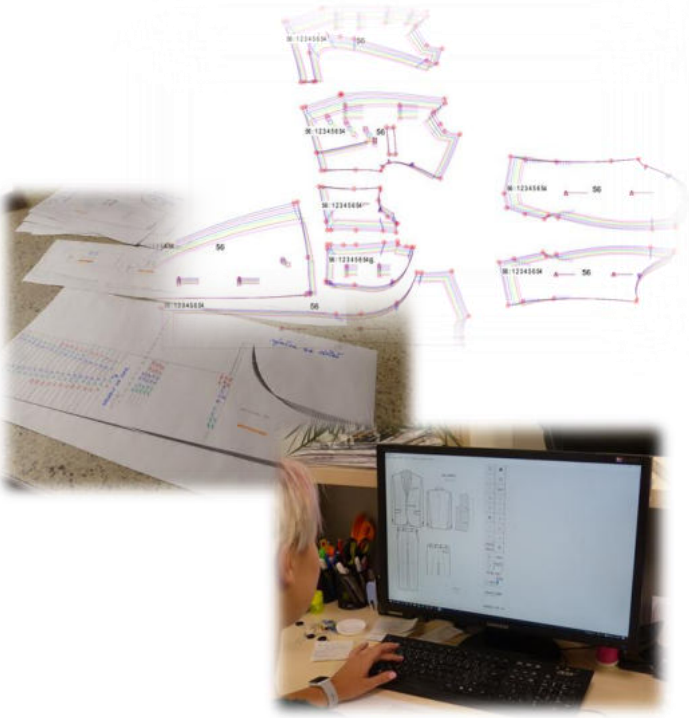

For almost 25 years, the company Koutný spol. s r.o. has produced professional clothing for the armed forces, administrative organizations or national institutions across Europe. We belong among the most reliable producers on the European market thanks to the high quality of our products we've achieved due to our many years of experience and use of the latest materials and technologies.

Each year, we successfully complete 200 – 300 complete orders, meaning started and completed orders (2017 – 283 orders) containing hundreds of thousands of our products (2017 – 423,000 pcs, 2016 – 389,000 pcs).

# Strenghts

## Design, Research & Development

## Production

## Quality audit inspection

# Battledress

Everyday use across different climates requires perfect processing using quality components as well as specific operational procedures that significantly extend the lifetime and mainly the functionality of the product. The choice of design, colour, cuts and proper materials for each customer is a matter of course.

# Tailor-made full dress and ceremonial uniforms

The production of full dress or ceremonial uniforms that are wrinkle-proof, soft and at the same time pleasant to touch requires the use of modern cuts as well as quality materials from Italy, France and Spain. We developed a unique measuring system with a wide variety of design and material options for suits, jackets or trousers for cases where the standard size range is not sufficient.

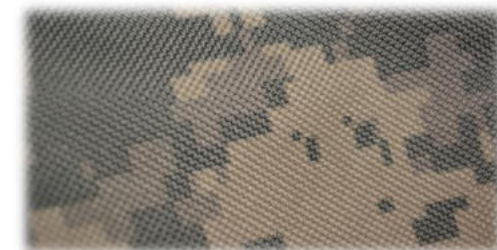

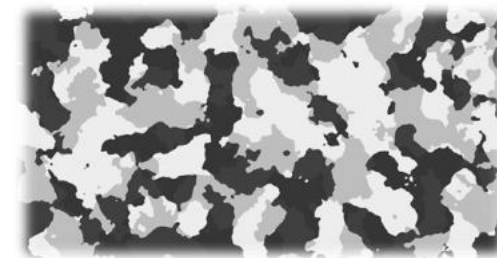

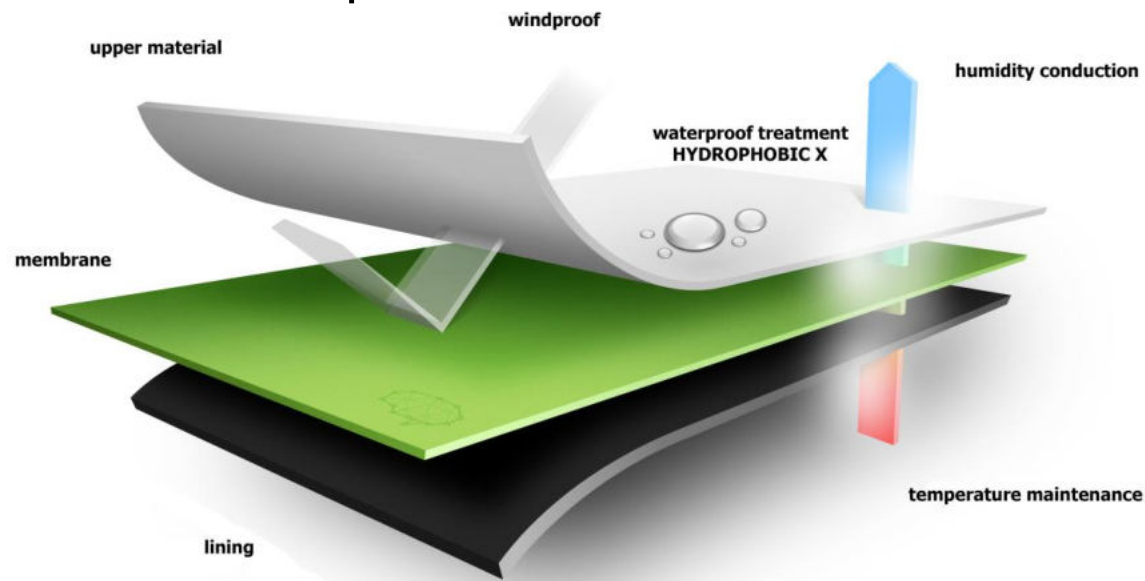

# Fashion suits & Tailor-made suits

Sewing tailor-made suits using the most accurate MADE TO MEASURE method comprises a significant part of our product portfolio. This procedure presents the unique connection of luxuriousness and effective time spent. We provide a choice from many already-existing as well as the latest cuts and materials that we adapt to particular sizes and add selected details.

# Materials

Across a wide range of materials, we place an emphasis not only on quality but also on ecological sustainability. It is worth mentioning the use of softshell, knitting with antistatic fibres, non-flammable fabric, 2 and 3-layer laminates with heat-sealed seam technology and waterproof zip fasteners. For army, sport or outdoor purposes we work also with the nanofiber membrane, bearing excellent properties such as extremely high vapour permeability, waterproofness with a high water column and 100% windproof.

# Ecological sustainability

Our company makes the maximum effort to contribute to the well-being of the planet Earth with the long-term integration of innovative sustainable solutions into our working procedures.

We promote environmental management among our suppliers and we prefer materials produced in accordance with this philosophy, bioproducts or biodegradable products, and products manufactured in countries observing the Charter of Fundamental Rights and Freedoms.

We regularly assess the environmental impacts of the used materials, processes, equipment and packaging with the aim to minimise these impacts and always restore anything that was influenced by our activity.

We encourage our employees' responsibility by means of accurate principles and procedures and training in these issues.

We minimise waste production and thus the corresponding recycling, including innovation and the prevention of pollution.

We implement innovations and technologies to reduce emissions and noise.

We observe the legislation in force in the area of the environment.

We increase awareness about the principles of environmental protection among our employees and the public alike.

# Certificates & References

ISO 9001 : 2015

AQAP 2110
